

Remform®

Remform® screws are thread rolling fasteners with a unique thread form to provide superior performance in today's wide range of plastics. The asymmetrical thread minimizes radial hoop stress to reduce boss bursting. The narrow tip angle also reduces stress in the plastic nut member.

Benefits

- Asymmetrical thread
- Minimizes radial hoop stress.
- Narrow tip angle reduce stress in plastics nut member.
- Radius leading flank

Machined, CNC and Turned Parts

A wide array of CNC, Lathe and Machining equipment and capabilities allow primary and secondary operations such as milling, drilling and grinding to supply precision ferrous and non-ferrous metal components. Utilizing precision 2 & 4 axis CNC equipment, machine and turned parts are manufactured to meet demanding design requirements.
