

Brass Inserts

Infastech manufactures a wide range of NC Turned Brass Inserts for thermal, ultra-sonic and press-fit installation. Sizes range from miniature to larger diameters and special design inserts for difficult applications are available on request. Sourcing both the insert and the mating screw from the one supplier also helps reduce supply chain costs.

Self-Clinching Fasteners

Self clinching fasteners are ideal for applications that require strong threads in thin metal. Installation requires a pressed force into a punched, drilled or cast hole to provide high push out and torque out resistance.

Materials: Low carbon steel, stainless steel, brass, aluminum and nylon.

Sizes: M1 to M15
